# Electrical Ratings

Items	Test Condition/Description	Requirement	
DC Spark-over Voltage	The voltage is measured with voltage ramp dv/dt=100V/s. Test is between each side electrode and center electrode.		
Maximum Impulse Spark-over Voltage	The maximum impulse spark-over voltage is measured with voltage ramp dv/dt=1000V/µs. Test is between each side electrode and center electrode.		
Impulse Discharge Current	Maximum surge current that can be applied through center electrode with 8/20μs waveform, for 10 times with 3min interval time, which will be equally divided between each side electrode to center electrode, without causing the DC breakdown voltage to change more than 25% from its initial measured value.  Crest value  100 90 20μs  Time Impulse Width	To meet the specified value	
Alternating Discharge Current	Rated RMS value of AC current at 50Hz, 1 sec. for 10 times with interval time 3 min. DC spark-over voltage shall not change more than ±25% from its initial value. Test is between each side electrode and center electrode.  IR>10 <sup>8</sup> ohms (-20%, +30% for 70~90V).		
Insulation Resistance	The resistance of gas tube shall be measured between each side electrodes and center electrode.		
Capacitance	The capacitance of gas tube shall be measured between each side electrodes and center electrode.  Test frequency: 1MHz
